ABS LABOUR FORCE SURVEY
AUGUST 1980

HUR920

0001

1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

2. The next step is to gather information about the problem. This includes checking the logs, talking to the users, and looking at the system architecture.

3. Once you have gathered the information, you can start to analyze the problem. This involves looking for patterns in the data and trying to understand what is causing the problem.

4. After you have analyzed the problem, you can start to develop a solution. This might involve changing the code, updating the hardware, or reconfiguring the system.

5. Finally, you need to test the solution to make sure it works. This involves running the system and checking to see if the problem has been resolved.
